

Ion Life RE: Life Ionizers and Tyent USA

Compare Water Ionizers?

Source: <http://www.ionizers.org/comparewaterionizers.html>

Jupiter Science water ionizers have been sold in the USA since 1995 and recently the great success of IonLife, as the industry leader, has resulted in many new players. Because new players have little to lose and possibly a lot to gain it is very tempting to put up a good looking site that compare water ionizers, then manipulate, cover-up or not reveal facts and figures to fool the unwary.

IonLife has been, and is, happy to let our customers and dealers speak for themselves. But there comes a time when it is necessary to get involved on another level. As an example of what is NOT a true, independent site, comparing water ionizers, please go to <http://www.compareionizers.com>. Is it obvious who put up this site and for what purpose? Are you told this is not an unbiased compare water ionizer site because it is owned and run by Life Ionizers?

Next click on the link that goes to the comparison chart. Did you expect or hope that the information here would be unbiased and accurate? And do you see here that Life Ionizers has changed "manufacturer" three times since 2007? Now please click on the Independent Comparison Lab Tests button on the compare water ionizer site. These compare water ionizer tests were apparently run on hard water (where the pH is high to start with) and apparently show the Orion and Athena hardly able to change the pH at all, unlike the Life Ionizer unit that gets an impressive 10.9 pH.

Well, we know these results are not true because:

- a. The Orion and Aquarius are exactly the same ionizer inside yet somehow give a 7.9 and 9.3 using the same water.
- b. IonLife would not be in business as the leading ionizing company with over 600 dealers in USA plus Agents in about 28 other countries if we did not get great results in pH, ORP and reliability. We know Jupiter Science ionizers compare well to any other brand and with the patented DARC cleaning system we know our ionizers will keep performing like new for many years after others have failed due to buildup and breakdown of the plates etc.
- c. The person in the white coat was employed by Life Ionizer in 2008 as a salesman and was employed with no experience in water ionization and with no scientific qualification.
- d. Do a web search for dealers that sell Jupiter models and other models. Ask them what they think of Jupiter and what results they have achieved.

Now read on ... this gets interesting!

So, on July 22, 2008, we decided to call *Aquatic Consulting & Testing Inc* to see how these test results that compare water ionizers were obtained. The technician, we spoke to, knew about the ionizer tests and told us that he was never sent any ionizers! Instead what he was sent were water samples in the mail, by a dealer of Life Ionizers, with the name of the ionizers on the outside!!! He did what he was asked to do and now what you see is what Life Ionizers wants you to see.

Another example of a bogus compare water ionizer site is www.ionizersreviewed.com. All the "information" on this site was put up by the importer selling the unit. The guy in the video was Rob Gray of Tyent. And guess which unit "appeared" to perform the best? Please notice a) how the "tests" are performed with completely un-credible and non-scientific methods and protocols and b) how answers to obvious questions are ignored such as, "How old is the unit?", "What was the water source?", "What levels are used in testing?" and "What type of meters are used and are they cleaned and calibrated?" Etc.

Also these compare water ionizer sites ignore a very important issue; who are you buying from? Emco Tech has been making ionizers as long as any company around (28+ years) and selling ionizers into the US market longer than any other company (14+ years). We provide better service, more post sale tools like installation and user DVDs, and have excellent customer service and manuals. We have already been and will continue to be around a lot longer than our competition. Let's shift the conversation about comparisons to include ALL the salient questions. Our ionizers perform extremely well and will continue to, long after others have built up tremendous scaling, and we provide the best certainty and service.

So when you look at videos that show a man in a white lab coat testing ionizers or see performance charts or read about this company being the biggest and best then please ask questions and check around. We will happily provide evidence to back up everything we say on our site.
